Remote Desktop Manager is a utility designed to assist you in managing remote desktop sessions. This utility helps you to schedule remote desktop sessions and schedule its start and stop. It also allows you to monitor their connection, disconnection, logoff, and reconnection, and much more. The most important feature of the application is to be able to schedule the session that starts at a specific time and ends at a specific time. You can specify the user name, the computer name, and the password. It is possible to configure these options before starting a remote session. You can schedule each user and also each computer. You can schedule up to four sessions at once. You can cancel or abort scheduled sessions as well. Remote Desktop Manager is free, but it does not offer support for scheduling sessions on a mobile device. Some Features Remote Desktop Manager offers three different user interfaces that can be selected before starting a remote session: a simple one, a clock interface, and a simple to use interface. In addition, it offers the ability to limit the connections that can be made from a remote desktop connection. For example, you can allow only your IP address to be connect from remote locations.
